Man smiling while looking at an orange iPhone next to a MacBook laptop

Quick answer The Hedy API gives developers programmatic access to meeting data: full transcripts, AI summaries, highlights, action items, topics, and signed webhooks. RESTful endpoints, simple API key auth, and webhook payloads signed for verification. Available on Hedy Pro (\$12.99/month) with a free tier suitable for testing. Full docs at SwaggerHub .

Exciting news for developers! Today, we're thrilled to announce the launch of the Hedy API, opening up new possibilities for integrating Hedy's AI-powered meeting intelligence into your applications. Now you can help your users become the brightest people in any room by bringing Hedy's capabilities directly into your software.

Unlock the Power of Meeting Intelligence

The Hedy API gives you programmatic access to our core features, including:

Session Management

Access complete meeting data, including transcripts, summaries, and AI-generated insights. Whether you're building a project management tool or a learning platform, you can now enhance your application with Hedy's comprehensive meeting intelligence.

Smart Highlights

Tap into our powerful highlight system to help users capture and analyze key moments. Each highlight comes with AI-generated insights and context, perfect for knowledge management and learning applications.

Real-Time Updates

Stay in sync with meeting progress through our webhook system. Get notified when sessions begin, end, or when important moments are captured, enabling you to create responsive, intelligent applications.

Built for Developers, by Developers

We've designed the Hedy API with developers in mind:

- Simple Authentication : Generate and manage API keys directly from your Hedy account
- Comprehensive Documentation : Clear, example-rich documentation to get you started quickly
- Secure Webhooks : Verified payload delivery with signing secrets
- RESTful Design : Intuitive endpoints following REST best practices

Getting Started

Ready to add Hedy's intelligence to your application? Here's how to begin:

1. Log into your Hedy account and visit Account Settings
2. Generate your API key in the new API section
3. Check out our API documentation (<https://app.swaggerhub.com/apis-docs/HedyAI/hedy-api/>) for detailed guides and examples
4. Start building!

Example Use Cases

The possibilities are endless, but here are some ways developers are already planning to use the Hedy API:

- Project Management Tools : Automatically create and assign tasks from meeting discussions
- Learning Management Systems : Enhance educational platforms with AI-powered study aids
- Knowledge Management : Build intelligent systems that capture and organize meeting insights
- Team Collaboration : Create custom solutions for distributed teams to stay aligned

What's Next

This is just the beginning of Hedy's API journey. We're excited to see what you'll build, and we're committed to expanding our API capabilities based on your feedback and needs.

Join our Slack Community (<https://slack.hedy.ai/>) to connect with other developers, share ideas, and get support as you build with Hedy.

Remember, with Hedy's API, you're not just building applications – you're helping people unleash their full potential in every conversation. We can't wait to see what you create! 🚀

Have questions about the API? Drop us a line (</contact>) or join our Slack community. We're here to help you build something brilliant!

Frequently Asked Questions

Is the Hedy API free?

Free tier accounts get limited API access suitable for testing. Production workflows require a Hedy Pro subscription (\$12.99/month or \$99.99/year) for full API access including session retrieval, highlights, todos, topics, and webhook subscriptions.

How does Hedy API authentication work?

The Hedy API uses API key authentication. Generate a key in Hedy's Account Settings under the API section, then include it in the Authorization header of your requests. Keys can be revoked instantly if compromised.

Does the Hedy API support webhooks?

Yes. Webhooks fire on events like `session.created`, `session.ended`, `highlight.created`, and `todo.exported`. Payloads include the full session data and are signed with your webhook secret for verification. The webhook limit is 50 endpoints per account with friendly names and selective delivery.

What can I build with the Hedy API?

Common patterns include syncing meeting summaries to project management tools, populating CRM activities from sales calls, building knowledge bases from interview transcripts, generating learning aids from lectures, and routing action items into team task systems.

Where are the Hedy API docs?

Full API documentation is at SwaggerHub (<https://app.swaggerhub.com/apis-docs/HedyAI/hedy-api/>). The docs cover authentication, endpoints, request/response schemas, rate limits, and webhook signature verification. EU data-residency accounts use `eu-api.hedy.bot` for the same endpoints.
